

For this deliverable, I need you to create a PowerPoint Presentation based on the summaries, pivots, and other data analytics you have completed using the given data.

I would also like you to present the top breed with most and least sales in both cat and dog breeds. If you already have these findings based on your analysis, then you can just copy and paste the results to your presentation. If you don't have any findings about these yet, you can go back to your excel file and find the breeds with the most and least sales using excel functions.

Please provide clear and concise descriptions of each graph.
